USER GUIDE

FoodPrint

Canteen Billing App — Administrator Guide

What's in this guide

- Your dashboard: every canteen's sales, credit, budgets and trends
- Managing canteen branches and staff accounts
- Managing the menu, sending notices and running the Master Credit Ledger
- Analytics & Graphs, Monthly Budgets, and Cash Reconciliation Logs
- Exporting reports to Excel, and how printing works in this app
- What common messages on screen mean, and what to do about them

App: FoodPrint · **Role:** Administrator · **Guide version:** 1.0 · November 2026

Contents

1. Welcome — how this guide is organised, and how admin differs from cashier
2. Signing in
3. Your dashboard — every canteen at a glance, and exporting to Excel
4. Manage Canteens & Staff — branches, cashier and admin accounts
5. Manage Menu Items — per canteen, including delete
6. Broadcast Notice — announcing to every staff account
7. Master Credit Ledger — every canteen's credit bills
8. Analytics & Graphs — trends, profit, staff performance
9. Monthly Budget & Expenses — setting each canteen's budget
10. Cash Reconciliation Logs — every canteen's daily closings
11. All Bills History
12. SMS Broadcast Specials — coming soon
13. Printing in FoodPrint — how it works, and what admin does instead
14. Signing out
15. Troubleshooting & common messages
16. Quick reference card

1 Welcome

This guide explains every screen and function an Administrator uses in FoodPrint.

As an **Administrator**, you are not limited to one canteen branch — you can see and manage every branch, and your account is automatically treated as belonging to every canteen, including ones added after your account was created. Cashiers, by contrast, work inside one assigned branch only; if you also need to understand the day-to-day billing screens your cashiers use, see the companion *Cashier User Guide*.

How to read this guide

Button and screen names are shown like this: **Add Branch** for a button you tap, and `Manage Canteens & Staff` for a screen title. Numbered steps are things you do in order. Boxes like this one give extra tips; orange and red boxes are warnings worth reading carefully.

Every money-affecting action needs a connection

Setting a budget, sending a notice, adding staff, creating or deleting a canteen — all of these save straight to the server. FoodPrint never pretends an action succeeded if it could not actually reach the server; you will always see a clear message if something did not save.

2 Signing in

1. Open the FoodPrint app and enter your **Email Address** and **Password** on the `Welcome Back` screen.

2. Tap **Sign In**. Because your account's role is "admin", you are taken straight to the `Admin Dashboard` rather than the cashier billing screen.

3. If you forget your password, enter your email and tap **Forgot Password?** to receive a reset link by email.

The same sign-in protections apply to admin accounts as to cashier accounts: a deactivated account, a missing staff record, or a lost connection while checking your account will all stop you from entering with a clear message explaining why — never silently.

3 Your dashboard

The admin dashboard summarises every canteen's business at a glance, with the option to focus on just one.

ACTIVE CANTEEN VIEW

Near the top of the dashboard is a dropdown labelled **ACTIVE CANTEEN VIEW**. Choose **All Canteens (Overall)** to see every branch combined, or pick one branch to see only its figures. This dropdown only ever lists canteens that currently exist — it updates automatically if a canteen is added or deleted.

The four metric cards

CARD	SHOWS / OPENS
Today's Sales	Today's total for the selected canteen view. Tap to open the Daily Sales Report.
Month's Revenue	This month's total so far. Tap to open the Monthly Sales Breakdown, a day-by-day chart for the month.
Total Credit Due	Everything currently owed by credit customers. Tap to open the Master Credit Ledger.
Month's Expenses	This month's logged expenses so far. Tap to open Monthly Budget & Expenses.

Each card shows a dash (—) rather than a false ₹0 while it is loading or if it fails to load, so a slow connection can never be mistaken for "no sales".

Budget alert banner

If any canteen's monthly budget is running low (under 15% remaining) or has been exceeded, a red banner lists each affected canteen by name with how much is left or how far over it is — the worst canteen first.

Weekly trend chart and recent bills

Below the cards, a 7-day chart shows daily sales and credit, and a short list shows the most recent bills — tap any bill to see its full detail, or tap through to All Bills for the complete history.

Exporting to Excel

1. Tap the download icon in the dashboard's app bar.
2. Choose a period: **This month**, **Last 3 months**, **Last 12 months**, or **All time**.
3. FoodPrint reads the data in the background (you can see progress for large exports) and builds an Excel workbook with sales, expenses and credit broken down per canteen.
4. Share or save the finished file using your phone's normal share screen.

4 Manage Canteens & Staff

Open this from the side menu (☰). It has two tabs: **Canteens** and **Staff**.

Canteens tab — adding a branch

1. Tap **+ Add Branch**.
2. Enter a **Branch Name** (for example "Canteen 2 — North Wing"). FoodPrint generates a clean internal ID from the name automatically.
3. Confirm. The new branch immediately appears everywhere a canteen can be chosen — dashboards, menus, budgets, ledgers, analytics.

Canteens tab — renaming or deleting a branch

Tap any canteen row to expand it and see its **Assigned Staff** — every cashier belonging to it, plus every admin (marked **ADMIN · ALL CANTEENS**, since admins automatically have access everywhere). Use the pencil and bin icons on the row to rename or delete that branch. **Every canteen can be renamed and deleted, including "Main Canteen"** — there is nothing special about it any more.

What happens when you delete a canteen

- If no cashiers are assigned to it, it is deleted immediately.
- If cashiers are assigned to it and **Main Canteen** still exists (and is not the one you are deleting), those cashiers are automatically moved to Main Canteen as part of the same action, and you are told exactly who was moved.
- If moving them to Main Canteen is not possible, the delete is **blocked** — FoodPrint names every cashier still assigned and tells you to reassign them first (Staff tab → their row's menu → **Reassign Canteen**), so a cashier can never be left without a canteen.
- Admins are never affected by a canteen delete — they keep access to every remaining canteen automatically.
- **Existing bills, expenses, closings and menu items are never deleted** along with the canteen. They remain in the system and still count under "All Canteens" views, but can no longer be picked as a single branch. If you recreate a canteen with the same name later, it gets a new internal ID and is not automatically reconnected to the old records.

Staff tab — adding a staff account

1. Tap **+ Add Staff**.
2. Enter an **Email Address** and a **Password (min 6 chars)** for their new login.
3. Choose the **Role**: `cashier` or `admin`.
4. If you chose **cashier**, also pick which canteen to **Assign to Canteen** from the list of canteens that currently exist.
5. If you chose **admin**, no canteen picker is shown — a note explains that admins can access every canteen automatically, including ones added later.
6. Tap **Create**.

Staff tab — managing an existing account

Each row shows the person's email, role badge, and canteen (or **"All canteens"** for an admin). Tap the ⋮ menu on a row for:

OPTION	WHAT IT DOES
Reassign Canteen	Moves a cashier to a different branch (not shown for admin accounts, since they are not tied to one canteen).
Send Password Reset	Emails that person a password reset link.
Remove Staff	Deletes their staff record — their login will no longer be recognised by the app.

> **Deactivating instead of removing**
>
> If you simply want to suspend someone's access without deleting their history, deactivate their account rather than removing it — a deactivated account is refused at sign-in with a clear message, but its record (and their name on old bills) is preserved.

5 Manage Menu Items

Open from the side menu. Because menus are per canteen, you first choose which one you are working on.

1. At the top of the screen, use the **Canteen** dropdown to pick one branch. While **All canteens** is selected, the screen shows "Choose a canteen" and nothing can be viewed or edited — this is deliberate, so an item can never be added to the wrong branch by mistake.

2. Once a canteen is chosen, the **All Items** tab lists everything on that canteen's menu, searchable by name or code.

3. Use the **Add / Edit** tab the same way a cashier does (code, name, cost price, Full and Half price) — see Section 10 of the Cashier Guide for the field-by-field steps.

4. Unlike a cashier, you also see a delete (bin) icon on every item — **only an administrator can delete a menu item.**

6 Broadcast Notice

Send an announcement that appears to every staff member across every canteen.

1. Open **Broadcast Notice** from the side menu.
2. Fill in a **Title** and a **Message**.
3. Confirm **Send to All Staff**.

Staff see it as a pop-up the first time they open the app after it is sent, and it stays in their Notifications list with an unread badge until they open it.

7 Master Credit Ledger

Every credit bill from every canteen, in one place.

1. Open **Master Credit Ledger** from the side menu. By default it shows **All canteens**.
2. Use the **Canteen** dropdown to narrow it to one branch — when a single canteen is selected, each bill no longer repeats its canteen name since it is implied; with All canteens selected, each bill shows which canteen it belongs to.
3. Search by bill number, customer name, or phone using the search box.
4. Filter by status using the **All** / **Pending** / **Paid** chips.
5. A summary line at the top of the list shows the bill count and the exact total still due.
6. Tap any bill to open its full receipt detail.

8 Analytics & Graphs

Deeper trends and performance numbers, with the same canteen chooser pattern as the rest of the admin tools.

1. Open **Analytics & Graphs**. Pick **All canteens** (the default) or one canteen using the Canteen dropdown.
2. Choose a period: **30 days**, **90 days**, **6 months** (the default), **12 months**, or **All time**.
3. Use the five tabs across the top to switch views:

TAB	WHAT IT SHOWS
Weekly	The last 7 business days' sales and credit as a chart.
Monthly	Monthly totals over the chosen period.
Payments	Sales broken down by Cash / UPI / Credit, and by time of day.
Profit	Top-selling items by revenue, with known-cost profit where a cost price has been recorded; items whose cost is unknown are labelled clearly rather than given a guessed profit figure.
Ops	Staff sales performance, unusual-day flags, and a short-term demand forecast.

Tap ↻ **Refresh** at any time to reload with the current canteen and period. A status line below the period chips shows how much data was read and when it was last updated; if a load is too large, it is clearly marked **INCOMPLETE (row limit reached)** rather than silently showing partial numbers as if they were complete.

9 Monthly Budget & Expenses

Each canteen has its own monthly budget — this is where you set it.

1. Open **Monthly Budget & Expenses**. Use the **Canteen** dropdown to choose a branch.
2. With **All canteens** selected, you see combined totals only, as a read-only overview — a note explains that budgets must be set per canteen, one at a time.
3. With one canteen selected, tap the month's pencil icon to **Set Budget** for that canteen and month, and enter the amount.
4. Each month's card expands to show that canteen's **Budget**, **Spent**, and **Remaining**, plus the list of individual expenses logged against it.

Why there is no single "company-wide" budget

Budgets were changed from one shared organisation-wide figure to a separate figure per canteen, so each branch's spending is judged against its own allocation rather than a pooled total that one branch could exhaust on behalf of all the others.

10 Cash Reconciliation Logs

Review every canteen's daily cash closings (see Section 7 of the Cashier Guide for how a cashier submits one).

1. Open **Cash Reconciliation Logs**. Use the Canteen dropdown to see **All canteens** or just one.

2. Each entry shows the date, which canteen it belongs to, who submitted it, the expected (system) cash, the actual counted cash, and the exact discrepancy — down to the paisa, never rounded to the nearest rupee.

3. A **Balanced**, **Shortage**, or **Surplus** tag makes it easy to scan for problem days.

11 All Bills History

The complete bill history across the canteen view currently selected on the dashboard, searchable and browsable month by month. Tap any bill for its full detail.

12 SMS Broadcast Specials

Listed in the side menu but not built yet.

Tapping **SMS Broadcast Specials** shows a **"Coming soon"** message, for both admin and cashier accounts. Nothing to configure here yet.

13 Printing in FoodPrint

An honest explanation of how receipt printing works in this app, and what your role in it is as an administrator.

Who actually prints receipts

Physical receipt printing happens at the **cashier's billing screen** only, over a Bluetooth connection to a thermal printer at that counter. Pairing a printer, connecting to it and printing a receipt are all cashier actions, covered in full in Section 5 of the *Cashier User Guide*. There is currently no admin screen for printing or re-printing a receipt — an administrator views a bill's full detail (date, items, total, payment mode) on screen, not as a printed copy.

Your equivalent: exporting to Excel

For admin reporting, the equivalent of "producing a paper record" is the Excel export described in Section 3 — it produces a spreadsheet file covering sales, expenses and credit for a chosen period and canteen, which you can then print from a computer using any spreadsheet program, if a paper copy is needed for your own records.

If a cashier reports printer problems

The printer itself is managed entirely on the cashier's phone. If a cashier reports the printer will not connect, direct them to Section 5 of the Cashier Guide — most issues are either Bluetooth being off, the printer not being paired in Android's own Bluetooth settings first, or the one-time Bluetooth permission prompt being denied by mistake. On Android 12 and newer phones, make sure cashiers are on the current version of the app, since an older build could fail to request the correct Bluetooth permission.

14 Signing out

1. Open the side menu (☰) and tap **Logout** at the bottom, below the divider.

2. You are returned to the sign-in screen.

15 Troubleshooting & common messages

FoodPrint explains problems in plain language rather than leaving you to guess. Here is what the most common admin-facing messages mean.

YOU SEE	WHAT IT MEANS / WHAT TO DO
"Could not load — This screen needs a one-time database setup that is not finished yet. Please tell the admin."	You *are* the admin — this means a one-time technical setup step has not been completed by whoever manages the app's deployment. It is not something to fix from inside the app itself.
"Could not load — Cannot reach the server."	Check your internet connection and tap **Try again**.
"Could not load — You do not have access to this information."	Your account's role or canteen access has an issue — this is unusual for an admin account; check that your account's role is correctly set to "admin".
"Choose a canteen" on Manage Menu, or a note on Monthly Budget	Not an error — these screens require one specific canteen to be selected before you can edit anything, because budgets and menus are always per canteen.
"Cannot delete '…' yet"	A canteen delete was blocked because cashiers are still assigned to it and there was no Main Canteen to move them to automatically. Reassign them first (Section 4), then delete.
INCOMPLETE (row limit reached), in Analytics	The selected period has more data than one load safely reads at once. Narrow the period (for example, 90 days instead of All time) for complete figures.

A good rule of thumb

If an action fails to save — a canteen, a staff account, a notice, a budget — FoodPrint always says so clearly, with a specific reason where one is known. It never shows a false "success" for something that did not actually reach the server.

16 Quick reference card

Add a branch

- Canteens & Staff → Canteens tab
- + Add Branch → name it

Add a cashier

- Canteens & Staff → Staff tab
- + Add Staff → cashier → pick canteen

Add another admin

- + Add Staff → admin → no canteen needed
- They get every canteen automatically

Delete a canteen

- Blocked if cashiers are stranded
- Reassign them first if asked to
- Bills/expenses are kept, not deleted

Set a budget

- Monthly Budget → pick ONE canteen
- Pencil icon on the month → enter amount

See everything at once

- Dashboard, Ledger, Analytics, Cash Logs: pick "All canteens"

Printing

- Done by cashiers, at billing, not by admin
- Your output is the Excel export (Section 3)

Something went wrong

- Read the on-screen message — it explains itself
- Check the internet connection
- Try again if offered
